ABOUT

Software Engineer with 8+ years of experience building production software, specializing in backend systems, distributed architectures, and scalable services. Experienced in APIs, microservices, event-driven systems, and integrations, with a product-oriented approach to system design and technical decision-making.

EXPERIENCE

Software Engineer · Nuvemshop

Aug 2019 – Nov 2025

Buenos Aires · Hybrid

- Worked on the core PHP/Laravel monolith while progressively migrating responsibilities to new microservices, reducing coupling and modernizing the platform's architecture.
- Designed and implemented the Payments API and Scala microservices with React-based checkout flows, enabling integration with 30+ payment providers in Latin America.
- Developed the Promotions microservice in Java, implementing discount, coupon, and free-shipping features as an independent domain.
- Built a Node.js service with Kafka and Elasticsearch to track and audit merchant activity.
- Implemented authentication and security improvements, including 2FA and session management for merchant accounts.

Full Stack Developer · UTN.BA

Jul 2018 – Aug 2019

Buenos Aires · On-site

- Developed and evolved an Academic Management System used by faculty, students, and administrative staff, contributing to its migration to SIU Guaraní.
- Built full-stack features with PHP, Twig, and JavaScript and optimized SQL queries for performance.

EDUCATION

Information Systems Engineering

2014 - 2018

National Technological University (UTN) - Buenos Aires Regional Faculty

TECH STACK

- **Backend:** Java (Spring Boot), Scala (Play, Akka), Node.js, PHP (Laravel, Twig).
- **APIs & Messaging:** REST APIs, Kafka, Webhooks.
- **Data:** MySQL, PostgreSQL, MongoDB, Redis.
- **Search & Observability:** Elasticsearch, Kibana, Datadog, New Relic, Grafana.
- **Cloud & DevOps:** AWS, Docker, GitHub Actions, CircleCI.
- **Frontend:** JavaScript, TypeScript, React.
- **AI Engineering:** Claude Code, MCP, Subagents, SDD, Prompt Engineering.
